2028_REC_OOPS using Java_Week 10_Q3

Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : COD

1. Problem Statement

Priya is analyzing encrypted messages in a research project. She wants to analyze the frequency of each character in a given paragraph. The characters should be stored in a TreeMap so that the output is sorted in ascending order of characters automatically.

You are required to build a Java program that:

Uses a TreeMap<Character, Integer> to count how many times each character appears in the message.Ignores spaces and considers only alphabets (case-sensitive).Outputs the frequencies of characters in sorted order.

You must use a TreeMap in the class named MessageAnalyzer.

Input Format

The first line of input contains an integer n, the number of lines in the message.

The next n lines each contain a string (the encrypted message line).

Output Format

The first line of output prints: "Character Frequency:"

Then print each character and its frequency in the format: "<character>: <count>"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2
Hello World
Java

Output: Character Frequency:

H: 1
J: 1
W: 1
a: 2
d: 1
e: 1
l: 3
o: 2
r: 1
v: 1

Answer

```
import java.util.*;  
class MessageAnalyzer {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        int n = Integer.parseInt(sc.nextLine());  
        TreeMap<Character, Integer> map = new TreeMap<>();  
  
        for (int i = 0; i < n; i++) {  
            String line = sc.nextLine();  
            for (char c : line.toCharArray()) {  
                if (Character.isLetter(c)) {
```

```
        map.put(c, map.getOrDefault(c, 0) + 1);
    }
}
System.out.println("Character Frequency:");
for (Map.Entry<Character, Integer> entry : map.entrySet()) {
    System.out.println(entry.getKey() + ":" + entry.getValue());
}
}
```

Status : Correct

Marks : 10/10
